

# List of prime numbers

---

This is a list of articles about prime numbers. A prime number (or *prime*) is a natural number greater than 1 that has no positive divisors other than 1 and itself. By Euclid's theorem, there are an infinite number of prime numbers. Subsets of the prime numbers may be generated with various formulas for primes. The first 1000 primes are listed below, followed by lists of notable types of prime numbers in alphabetical order, giving their respective first terms. 1 is neither prime nor composite.

## The first 1000 prime numbers

---

---

The following table lists the first 1000 primes, with 20 columns of consecutive primes in each of the 50 rows.<sup>[1]</sup>

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

The [Goldbach conjecture](#) verification project reports that it has computed all primes smaller than  $4 \times 10^{18}$ .<sup>[2]</sup> That means 95,676,260,903,887,607 primes<sup>[3]</sup> (nearly  $10^{17}$ ), but they were not stored. There are known formulae to evaluate the [prime-counting function](#) (the number of primes smaller than a given value) faster than computing the primes. This has been used to compute that there are 1,925,320,391,606,803,968,923 primes (roughly  $2 \times 10^{21}$ ) smaller than  $10^{23}$ . A different computation found that there are 18,435,599,767,349,200,867,866 primes (roughly  $2 \times 10^{22}$ ) smaller than  $10^{24}$ , if the [Riemann hypothesis](#) is true.<sup>[4]</sup>

## Lists of primes by type

Below are listed the first prime numbers of many named forms and types. More details are in the article for the name. *n* is a [natural number](#) (including 0) in the definitions.

### Balanced primes

Primes with equal-sized [prime gaps](#) after and before them, so that they are equal to the [arithmetic mean](#) of the nearest primes after and before.

- 5, 53, 157, 173, 211, 257, 263, 373, 563, 593, 607, 653, 733, 947, 977, 1103, 1123, 1187, 1223, 1367, 1511, 1747, 1753, 1907, 2287, 2417, 2677, 2903, 2963, 3307, 3313, 3637, 3733, 4013, 4409, 4457, 4597, 4657, 4691, 4993, 5107, 5113, 5303, 5387, 5393 (OEIS: [A006562](#)).

### Bell primes

Primes that are the number of [partitions](#) of a set with *n* members.

2, 5, 877, 27644437, 35742549198872617291353508656626642567, 359334085968622831041960188598043661065388726959079837. The next term has 6,539 digits. (OEIS: [A051131](#))

### Chen primes

Where *p* is prime and *p*+2 is either a prime or [semiprime](#).

2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 47, 53, 59, 67, 71, 83, 89, 101, 107, 109, 113, 127, 131, 137, 139, 149, 157, 167, 179, 181, 191, 197, 199, 211, 227, 233, 239, 251, 257, 263, 269, 281, 293, 307, 311, 317, 337, 347, 353, 359, 379, 389, 401, 409 (OEIS: [A109611](#))

### Circular primes

A circular prime number is a number that remains prime on any cyclic rotation of its digits (in base 10).

2, 3, 5, 7, 11, 13, 17, 31, 37, 71, 73, 79, 97, 113, 131, 197, 199, 311, 337, 373, 719, 733, 919, 971, 991, 1193, 1931, 3119, 3779, 7793, 7937, 9311, 9377, 11939, 19391, 19937, 37199, 39119, 71993, 91193, 93719, 93911, 99371, 193939, 199933, 319993, 331999, 391939, 393919, 919393, 933199, 939193, 939391, 993319, 999331 (OEIS: [A068652](#))

Some sources only list the smallest prime in each cycle, for example, listing 13, but omitting 31 (OEIS really calls this sequence circular primes, but not the above sequence):

2, 3, 5, 7, 11, 13, 17, 37, 79, 113, 197, 199, 337, 1193, 3779, 11939, 19937, 193939, 199933, 111111111111111111, 11111111111111111111 (OEIS: [A016114](#))

All [repunit](#) primes are circular.

### Cluster primes

A cluster prime is a prime *p* such that every even [natural number](#)  $k \leq p - 3$  is the difference of two primes not exceeding *p*.

3, 5, 7, 11, 13, 17, 19, 23, ... (OEIS: [A038134](#))

All primes between 3 and 89, inclusive, are cluster primes. The first 10 primes that are *not* cluster primes are:

2, 97, 127, 149, 191, 211, 223, 227, 229, 251.

### Cousin primes

Where (*p*, *p* + 4) are both prime.

(3, 7), (7, 11), (13, 17), (19, 23), (37, 41), (43, 47), (67, 71), (79, 83), (97, 101), (103, 107), (109, 113), (127, 131), (163, 167), (193, 197), (223, 227), (229, 233), (277, 281) (OEIS: [A023200](#), OEIS: [A046132](#))

### Cuban primes

Of the form  $\frac{x^2-y^2}{x-y}$  where  $x = y + 1$ .

7, 19, 37, 61, 127, 271, 331, 397, 547, 631, 919, 1657, 1801, 1951, 2269, 2437, 2791, 3169, 3571, 4219, 4447, 5167, 5419, 6211, 7057, 7351, 8269, 9241, 10267, 11719, 12097, 13267, 13669, 16651, 19441, 19927, 22447, 23497, 24571, 25117, 26227, 27361, 33391, 35317 (OEIS: A002407)

Of the form  $\frac{x^3-y^3}{x-y}$  where  $x = y + 2$ .

13, 109, 193, 433, 769, 1201, 1453, 2029, 3469, 3889, 4801, 10093, 12289, 13873, 18253, 20173, 21169, 22189, 28813, 37633, 43201, 47629, 60493, 63949, 65713, 69313, 73009, 76801, 84673, 106033, 108301, 112909, 115249 (OEIS: A002648)

### **Cullen primes**

Of the form  $n \times 2^n + 1$ .

3, 393050634124102232869567034555427371542904833 (OEIS: A050920)

### **Delicate primes**

Primes that having any one of their (base 10) digits changed to any other value will always result in a composite number.

294001, 505447, 584141, 604171, 971767, 1062599, 1282529, 1524181, 2017963, 2474431, 2690201, 3085553, 3326489, 4393139 (OEIS: A050249)

### **Dihedral primes**

Primes that remain prime when read upside down or mirrored in a seven-segment display.

2, 5, 11, 101, 181, 1181, 1811, 18181, 108881, 110881, 118081, 120121, 121021, 121151, 150151, 151051, 151121, 180181, 180811, 181081 (OEIS: A134996)

### **Eisenstein primes without imaginary part**

Eisenstein integers that are irreducible and real numbers (primes of the form  $3n - 1$ ).

2, 5, 11, 17, 23, 29, 41, 47, 53, 59, 71, 83, 89, 101, 107, 113, 131, 137, 149, 167, 173, 179, 191, 197, 227, 233, 239, 251, 257, 263, 269, 281, 293, 311, 317, 347, 353, 359, 383, 389, 401 (OEIS: A003627)

### **Emirps**

Primes that become a different prime when their decimal digits are reversed. The name "emirp" is the reverse of the word "prime".

13, 17, 31, 37, 71, 73, 79, 97, 107, 113, 149, 157, 167, 179, 199, 311, 337, 347, 359, 389, 701, 709, 733, 739, 743, 751, 761, 769, 907, 937, 941, 953, 967, 971, 983, 991 (OEIS: A006567)

### **Euclid primes**

Of the form  $p_n\# + 1$  (a subset of primorial primes).

3, 7, 31, 211, 2311, 200560490131 (OEIS: A018239<sup>[5]</sup>)

### **Euler irregular primes**

A prime ***p*** that divides Euler number  $E_{2n}$  for some  $0 \leq 2n \leq p - 3$ .

19, 31, 43, 47, 61, 67, 71, 79, 101, 137, 139, 149, 193, 223, 241, 251, 263, 277, 307, 311, 349, 353, 359, 373, 379, 419, 433, 461, 463, 491, 509, 541, 563, 571, 577, 587 (OEIS: A120337)

### **Euler (*p*, *p* - 3) irregular primes**

Primes ***p*** such that (***p***, ***p* - 3**) is an Euler irregular pair.

149, 241, 2946901 (OEIS: A198245)

### **Factorial primes**

Of the form  $n! - 1$  or  $n! + 1$ .

2, 3, 5, 7, 23, 719, 5039, 39916801, 479001599, 87178291199, 10888869450418352160768000001, 265252859812191058636308479999999, 263130836933693530167218012159999999, 8683317618811886495518194401279999999 (OEIS: A088054)

### **Fermat primes**

Of the form  $2^{2^n} + 1$ .

3, 5, 17, 257, 65537 (OEIS: A019434)

As of June 2024 these are the only known Fermat primes, and conjecturally the only Fermat primes. The probability of the existence of another Fermat prime is less than one in a billion.<sup>[6]</sup>

### Generalized Fermat primes

Of the form  $a^{2^n} + 1$  for fixed integer  $a$ .

$a = 2$ : [3](#), [5](#), [17](#), [257](#), [65537](#) (OEIS: [A019434](#))

$a = 4$ : [5](#), [17](#), [257](#), [65537](#)

$a = 6$ : [7](#), [37](#), [1297](#)

$a = 8$ : (none exist)

$a = 10$ : [11](#), [101](#)

$a = 12$ : [13](#)

$a = 14$ : [197](#)

$a = 16$ : [17](#), [257](#), [65537](#)

$a = 18$ : [19](#)

$a = 20$ : [401](#), [160001](#)

$a = 22$ : [23](#)

$a = 24$ : [577](#), [331777](#)

### Fibonacci primes

Primes in the [Fibonacci sequence](#)  $F_0 = 0$ ,  $F_1 = 1$ ,  $F_n = F_{n-1} + F_{n-2}$ .

[2](#), [3](#), [5](#), [13](#), [89](#), [233](#), [1597](#), [28657](#), [514229](#), [433494437](#), [2971215073](#), [99194853094755497](#), [1066340417491710595814572169](#), [19134702400093278081449423917](#) (OEIS: [A005478](#))

### Fortunate primes

[Fortunate numbers](#) that are prime (it has been conjectured they all are).

[3](#), [5](#), [7](#), [13](#), [17](#), [19](#), [23](#), [37](#), [47](#), [59](#), [61](#), [67](#), [71](#), [79](#), [89](#), [101](#), [103](#), [107](#), [109](#), [127](#), [151](#), [157](#), [163](#), [167](#), [191](#), [197](#), [199](#), [223](#), [229](#), [233](#), [239](#), [271](#), [277](#), [283](#), [293](#), [307](#), [311](#), [313](#), [331](#), [353](#), [373](#), [379](#), [383](#), [397](#) (OEIS: [A046066](#))

### Gaussian primes

[Prime elements](#) of the Gaussian integers; equivalently, primes of the form  $4n + 3$ .

[3](#), [7](#), [11](#), [19](#), [23](#), [31](#), [43](#), [47](#), [59](#), [67](#), [71](#), [79](#), [83](#), [103](#), [107](#), [127](#), [131](#), [139](#), [151](#), [163](#), [167](#), [179](#), [191](#), [199](#), [211](#), [223](#), [227](#), [239](#), [251](#), [263](#), [271](#), [283](#), [307](#), [311](#), [331](#), [347](#), [359](#), [367](#), [379](#), [383](#), [419](#), [431](#), [439](#), [443](#), [463](#), [467](#), [479](#), [487](#), [491](#), [499](#), [503](#) (OEIS: [A002145](#))

### Good primes

Primes  $p_n$  for which  $p_n^2 > p_{n-i} p_{n+i}$  for all  $1 \leq i \leq n-1$ , where  $p_n$  is the  $n$ th prime.

[5](#), [11](#), [17](#), [29](#), [37](#), [41](#), [53](#), [59](#), [67](#), [71](#), [97](#), [101](#), [127](#), [149](#), [179](#), [191](#), [223](#), [227](#), [251](#), [257](#), [269](#), [307](#) (OEIS: [A028388](#))

### Happy primes

[Happy numbers](#) that are prime.

[7](#), [13](#), [19](#), [23](#), [31](#), [79](#), [97](#), [103](#), [109](#), [139](#), [167](#), [193](#), [239](#), [263](#), [293](#), [313](#), [331](#), [367](#), [379](#), [383](#), [397](#), [409](#), [487](#), [563](#), [617](#), [653](#), [673](#), [683](#), [709](#), [739](#), [761](#), [863](#), [881](#), [907](#), [937](#), [1009](#), [1033](#), [1039](#), [1093](#) (OEIS: [A035497](#))

### Harmonic primes

Primes  $p$  for which there are no solutions to  $H_k \equiv 0 \pmod{p}$  and  $H_k \equiv -\omega_p \pmod{p}$  for  $1 \leq k \leq p-2$ , where  $H_k$  denotes the  $k$ -th [harmonic number](#) and  $\omega_p$  denotes the [Wolstenholme quotient](#).<sup>[7]</sup>

[5](#), [13](#), [17](#), [23](#), [41](#), [67](#), [73](#), [79](#), [107](#), [113](#), [139](#), [149](#), [157](#), [179](#), [191](#), [193](#), [223](#), [239](#), [241](#), [251](#), [263](#), [277](#), [281](#), [293](#), [307](#), [311](#), [317](#), [331](#), [337](#), [349](#) (OEIS: [A092101](#))

## Higgs primes for squares

Primes  $p$  for which  $p - 1$  divides the square of the product of all earlier terms.

2, 3, 5, 7, 11, 13, 19, 23, 29, 31, 37, 43, 47, 53, 59, 61, 67, 71, 79, 101, 107, 127, 131, 139, 149, 151, 157, 173, 181, 191, 197, 199, 211, 223, 229, 263, 269, 277, 283, 311, 317, 331, 347, 349 (OEIS: A007459)

## Highly cototient primes

Primes that are a cototient more often than any integer below it except 1.

2, 23, 47, 59, 83, 89, 113, 167, 269, 389, 419, 509, 659, 839, 1049, 1259, 1889 (OEIS: A105440)

## Home primes

For  $n \geq 2$ , write the prime factorization of  $n$  in base 10 and concatenate the factors; iterate until a prime is reached.

2, 3, 211, 5, 23, 7, 3331113965338635107, 311, 773, 11, 223, 13, 13367, 1129, 31636373, 17, 233, 19, 3318308475676071413, 37, 211, 23, 331319, 773, 3251, 13367, 227, 29, 547, 31, 241271, 311, 31397, 1129, 71129, 37, 373, 313, 3314192745739, 41, 379, 43, 22815088913, 3411949, 223, 47, 6161791591356884791277 (OEIS: A037274)

## Irregular primes

Odd primes  $p$  that divide the class number of the  $p$ -th cyclotomic field.

37, 59, 67, 101, 103, 131, 149, 157, 233, 257, 263, 271, 283, 293, 307, 311, 347, 353, 379, 389, 401, 409, 421, 433, 461, 463, 467, 491, 523, 541, 547, 557, 577, 587, 593, 607, 613 (OEIS: A000928)

## $(p, p - 3)$ irregular primes

(See Wolstenholme prime)

## $(p, p - 5)$ irregular primes

Primes  $p$  such that  $(p, p - 5)$  is an irregular pair.<sup>[8]</sup>

37

## $(p, p - 9)$ irregular primes

Primes  $p$  such that  $(p, p - 9)$  is an irregular pair.<sup>[8]</sup>

67, 877 (OEIS: A212557)

## Isolated primes

Primes  $p$  such that neither  $p - 2$  nor  $p + 2$  is prime.

2, 23, 37, 47, 53, 67, 79, 83, 89, 97, 113, 127, 131, 157, 163, 167, 173, 211, 223, 233, 251, 257, 263, 277, 293, 307, 317, 331, 337, 353, 359, 367, 373, 379, 383, 389, 397, 401, 409, 439, 443, 449, 457, 467, 479, 487, 491, 499, 503, 509, 541, 547, 557, 563, 577, 587, 593, 607, 613, 631, 647, 653, 673, 677, 683, 691, 701, 709, 719, 727, 733, 739, 743, 751, 757, 761, 769, 773, 787, 797, 839, 853, 863, 877, 887, 907, 911, 919, 929, 937, 941, 947, 953, 967, 971, 977, 983, 991, 997 (OEIS: A007510)

## Leyland primes

Of the form  $x^y + y^x$ , with  $1 < x < y$ .

17, 593, 32993, 2097593, 8589935681, 59604644783353249, 523347633027360537213687137, 43143988327398957279342419750374600193 (OEIS: A094133)

## Long primes

Primes  $p$  for which, in a given base  $b$ ,  $\frac{b^{p-1} - 1}{p}$  gives a cyclic number. They are also called full reptend primes. Primes  $p$  for base 10:

7, 17, 19, 23, 29, 47, 59, 61, 97, 109, 113, 131, 149, 167, 179, 181, 193, 223, 229, 233, 257, 263, 269, 313, 337, 367, 379, 383, 389, 419, 433, 461, 487, 491, 499, 503, 509, 541, 571, 577, 593 (OEIS: A001913)

## Lucas primes

Primes in the Lucas number sequence  $L_0 = 2$ ,  $L_1 = 1$ ,  $L_n = L_{n-1} + L_{n-2}$ .

2,<sup>[9]</sup> 3, 7, 11, 29, 47, 199, 521, 2207, 3571, 9349, 3010349, 54018521, 370248451, 6643838879, 119218851371, 5600748293801, 688846502588399, 32361122672259149 (OEIS: [A005479](#))

## Lucky primes

Lucky numbers that are prime.

3, 7, 13, 31, 37, 43, 67, 73, 79, 127, 151, 163, 193, 211, 223, 241, 283, 307, 331, 349, 367, 409, 421, 433, 463, 487, 541, 577, 601, 613, 619, 631, 643, 673, 727, 739, 769, 787, 823, 883, 937, 991, 997 (OEIS: [A031157](#))

## Mersenne primes

Of the form  $2^n - 1$ .

3, 7, 31, 127, 8191, 131071, 524287, 2147483647, 2305843009213693951, 618970019642690137449562111, 162259276829213363391578010288127, 170141183460469231731687303715884105727 (OEIS: [A000668](#))

As of 2024, there are 52 known Mersenne primes. The 13th, 14th, and 52nd have respectively 157, 183, and 41,024,320 digits. This includes the largest known prime  $2^{136,279,841}-1$ , which is the 52nd Mersenne prime.

## Mersenne divisors

Primes  $p$  that divide  $2^n - 1$ , for some prime number  $n$ .

3, 7, 23, 31, 47, 89, 127, 167, 223, 233, 263, 359, 383, 431, 439, 479, 503, 719, 839, 863, 887, 983, 1103, 1319, 1367, 1399, 1433, 1439, 1487, 1823, 1913, 2039, 2063, 2089, 2207, 2351, 2383, 2447, 2687, 2767, 2879, 2903, 2999, 3023, 3119, 3167, 3343 (OEIS: [A122094](#))

All Mersenne primes are, by definition, members of this sequence.

## Mersenne prime exponents

Primes  $p$  such that  $2^p - 1$  is prime.

2, 3, 5, 7, 13, 17, 19, 31, 61, 89, 107, 127, 521, 607, 1279, 2203, 2281, 3217, 4253, 4423, 9689, 9941, 11213, 19937, 21701, 23209, 44497, 86243, 110503, 132049, 216091, 756839, 859433, 1257787, 1398269, 2976221, 3021377, 6972593, 13466917, 20996011, 24036583, 25964951, 30402457, 32582657, 37156667, 42643801, 43112609, 57885161 (OEIS: [A000043](#))

As of October 2024, four more are known to be in the sequence, but it is not known whether they are the next: 74207281, 77232917, 82589933, 136279841

## Double Mersenne primes

A subset of Mersenne primes of the form  $2^{2^p-1} - 1$  for prime  $p$ .

7, 127, 2147483647, 170141183460469231731687303715884105727 (primes in OEIS: [A077586](#))

## Generalized repunit primes

Of the form  $(a^n - 1) / (a - 1)$  for fixed integer  $a$ .

For  $a = 2$ , these are the Mersenne primes, while for  $a = 10$  they are the [repunit primes](#). For other small  $a$ , they are given below:

$a = 3$ : 13, 1093, 797161, 3754733257489862401973357979128773, 6957596529882152968992225251835887181478451547013 (OEIS: [A076481](#))

$a = 4$ : 5 (the only prime for  $a = 4$ )

$a$  = 5: 31, 19531, 12207031, 305175781, 177635683940025046467781066894531, 14693679385278593849609206715278070972733319459651094018859396328480215743184089660644531 (OEIS: [A086122](#))

$a = 6$ : 7, 43, 55987, 7369130657357778596659, 3546245297457217493590449191748546458005595187661976371 (OEIS: [A165210](#))

$a$  = 7: 2801, 16148168401, 85053461164796801949539541639542805770666392330682673302530819774105141531698707146930307290253537320447270457

$a = 8$ : 73 (the only prime for  $a = 8$ )

$a = 9$ : none exist

## Other generalizations and variations

Many generalizations of Mersenne primes have been defined. This include the following:

- Primes of the form  $b^n - (b - 1)^n$ ,<sup>[10][11][12]</sup> including the Mersenne primes and the [cuban primes](#) as special cases
- [Williams primes](#), of the form  $(b - 1) \cdot b^n - 1$

## Mills primes

Of the form  $\lfloor \theta^{3^n} \rfloor$ , where  $\theta$  is Mills' constant. This form is prime for all positive integers  $n$ .

2, 11, 1361, 2521008887, 16022236204009818131831320183 (OEIS: A051254)

## Minimal primes

Primes for which there is no shorter sub-sequence of the decimal digits that form a prime. There are exactly 26 minimal primes:

2, 3, 5, 7, 11, 19, 41, 61, 89, 409, 449, 499, 881, 991, 6469, 6949, 9001, 9049, 9649, 9949, 60649, 666649, 946669, 60000049, 66000049, 66600049 (OEIS: A071062)

## Newman–Shanks–Williams primes

Newman–Shanks–Williams numbers that are prime.

7, 41, 239, 9369319, 63018038201, 489133282872437279, 19175002942688032928599 (OEIS: A088165)

## Non-generous primes

Primes  $p$  for which the least positive primitive root is not a primitive root of  $p^2$ . Three such primes are known; it is not known whether there are more.<sup>[13]</sup>

2, 40487, 6692367337 (OEIS: A055578)

## Palindromic primes

Primes that remain the same when their decimal digits are read backwards.

2, 3, 5, 7, 11, 101, 131, 151, 181, 191, 313, 353, 373, 383, 727, 757, 787, 797, 919, 929, 10301, 10501, 10601, 11311, 11411, 12421, 12721, 12821, 13331, 13831, 13931, 14341, 14741 (OEIS: A002385)

## Palindromic wing primes

Primes of the form  $\frac{a(10^m - 1)}{9} \pm b \times 10^{\frac{m-1}{2}}$  with  $0 \leq a \pm b < 10$ .<sup>[14]</sup> This means all digits except the middle digit are equal.

101, 131, 151, 181, 191, 313, 353, 373, 383, 727, 757, 787, 797, 919, 929, 11311, 11411, 33533, 77377, 77477, 77977, 1114111, 1117111, 3331333, 3337333, 7772777, 7774777, 7778777, 111181111, 111191111, 777767777, 7777677777, 99999199999 (OEIS: A077798)

## Partition primes

Partition function values that are prime.

2, 3, 5, 7, 11, 101, 17977, 10619863, 6620830889, 80630964769, 228204732751, 1171432692373, 1398341745571, 10963707205259, 15285151248481, 10657331232548839, 790738119649411319, 18987964267331664557 (OEIS: A049575)

## Pell primes

Primes in the Pell number sequence  $P_0 = 0$ ,  $P_1 = 1$ ,  $P_n = 2P_{n-1} + P_{n-2}$ .

2, 5, 29, 5741, 33461, 44560482149, 1746860020068409, 68480406462161287469, 13558774610046711780701, 4125636888562548868221559797461449 (OEIS: A086383)

## Permutable primes

Any permutation of the decimal digits is a prime.

2, 3, 5, 7, 11, 13, 17, 31, 37, 71, 73, 79, 97, 113, 131, 199, 311, 337, 373, 733, 919, 991, 1111111111111111111, 11111111111111111111 (OEIS: A003459)

## Perrin primes

Primes in the Perrin number sequence  $P(0) = 3$ ,  $P(1) = 0$ ,  $P(2) = 2$ ,  $P(n) = P(n-2) + P(n-3)$ .

2, 3, 5, 7, 17, 29, 277, 367, 853, 14197, 43721, 1442968193, 792606555396977, 187278659180417234321, 66241160488780141071579864797 (OEIS: A074788)

## Pierpont primes

Of the form  $2^u 3^v + 1$  for some integers  $u, v \geq 0$ .

These are also [class 1- primes](#).

[2](#), [3](#), [5](#), [7](#), [13](#), [17](#), [19](#), [37](#), [73](#), [97](#), [109](#), [163](#), [193](#), [257](#), [433](#), [487](#), [577](#), [769](#), [1153](#), [1297](#), [1459](#), [2593](#), [2917](#), [3457](#), [3889](#), 10369, 12289, 17497, 18433, 39367, 52489, [65537](#), 139969, 147457 ([OEIS: A005109](#))

### **Pillai primes**

Primes  $p$  for which there exist  $n > 0$  such that  $p$  divides  $n! + 1$  and  $n$  does not divide  $p - 1$ .

[23](#), [29](#), [59](#), [61](#), [67](#), [71](#), [79](#), [83](#), [109](#), [137](#), [139](#), [149](#), [193](#), [227](#), [233](#), [239](#), [251](#), [257](#), [269](#), [271](#), [277](#), [293](#), [307](#), [311](#), [317](#), [359](#), [379](#), [383](#), [389](#), [397](#), [401](#), [419](#), [431](#), [449](#), [461](#), [463](#), [467](#), [479](#), [499](#) ([OEIS: A063980](#))

### **Primes of the form $n^4 + 1$**

Of the form  $n^4 + 1$ .<sup>[15][16]</sup>

[2](#), [17](#), [257](#), [1297](#), [65537](#), 160001, 331777, 614657, 1336337, 4477457, 5308417, 8503057, 9834497, 29986577, 40960001, 45212177, 59969537, 65610001, 126247697, 193877777, 303595777, 384160001, 406586897, 562448657, 655360001 ([OEIS: A037896](#))

### **Primeval primes**

Primes for which there are more prime permutations of some or all the decimal digits than for any smaller number.

[2](#), [13](#), [37](#), [107](#), [113](#), [137](#), [1013](#), [1237](#), [1367](#), 10079 ([OEIS: A119535](#))

### **Primorial primes**

Of the form  $p_n\# \pm 1$ .

[3](#), [5](#), [7](#), [29](#), [31](#), [211](#), [2309](#), [2311](#), 30029, 200560490131, 304250263527209, 23768741896345550770650537601358309 (union of [OEIS: A057705](#) and [OEIS: A018239<sup>\[5\]</sup>](#))

### **Proth primes**

Of the form  $k \times 2^n + 1$ , with odd  $k$  and  $k < 2^n$ .

[3](#), [5](#), [13](#), [17](#), [41](#), [97](#), [113](#), [193](#), [241](#), [257](#), [353](#), [449](#), [577](#), [641](#), [673](#), [769](#), [929](#), [1153](#), [1217](#), [1409](#), [1601](#), [2113](#), [2689](#), [2753](#), [3137](#), [3329](#), [3457](#), [4481](#), [4993](#), [6529](#), [7297](#), [7681](#), [7937](#), [9473](#), [9601](#), [9857](#) ([OEIS: A080076](#))

### **Pythagorean primes**

Of the form  $4n + 1$ .

[5](#), [13](#), [17](#), [29](#), [37](#), [41](#), [53](#), [61](#), [73](#), [89](#), [97](#), [101](#), [109](#), [113](#), [137](#), [149](#), [157](#), [173](#), [181](#), [193](#), [197](#), [229](#), [233](#), [241](#), [257](#), [269](#), [277](#), [281](#), [293](#), [313](#), [317](#), [337](#), [349](#), [353](#), [373](#), [389](#), [397](#), [401](#), [409](#), [421](#), [433](#), [449](#) ([OEIS: A002144](#))

### **Prime quadruplets**

Where  $(p, p+2, p+6, p+8)$  are all prime.

([5](#), [7](#), [11](#), [13](#)), ([11](#), [13](#), [17](#), [19](#)), ([101](#), [103](#), [107](#), [109](#)), ([191](#), [193](#), [197](#), [199](#)), ([821](#), [823](#), [827](#), [829](#)), ([1481](#), [1483](#), [1487](#), [1489](#)), ([1871](#), [1873](#), [1877](#), [1879](#)), ([2081](#), [2083](#), [2087](#), [2089](#)), ([3251](#), [3253](#), [3257](#), [3259](#)), ([3461](#), [3463](#), [3467](#), [3469](#)), ([5651](#), [5653](#), [5657](#), [5659](#)), ([9431](#), [9433](#), [9437](#), [9439](#)) ([OEIS: A007530](#), [OEIS: A136720](#), [OEIS: A136721](#), [OEIS: A090258](#))

### **Quartan primes**

Of the form  $x^4 + y^4$ , where  $x, y > 0$ .

[2](#), [17](#), [97](#), [257](#), [337](#), [641](#), [881](#) ([OEIS: A002645](#))

### **Ramanujan primes**

Integers  $R_n$  that are the smallest to give at least  $n$  primes from  $x/2$  to  $x$  for all  $x \geq R_n$  (all such integers are primes).

[2](#), [11](#), [17](#), [29](#), [41](#), [47](#), [59](#), [67](#), [71](#), [97](#), [101](#), [107](#), [127](#), [149](#), [151](#), [167](#), [179](#), [181](#), [227](#), [229](#), [233](#), [239](#), [241](#), [263](#), [269](#), [281](#), [307](#), [311](#), [347](#), [349](#), [367](#), [373](#), [401](#), [409](#), [419](#), [431](#), [433](#), [439](#), [461](#), [487](#), [491](#) ([OEIS: A104272](#))

### **Regular primes**

Primes  $p$  that do not divide the [class number](#) of the  $p$ -th cyclotomic field.

3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 41, 43, 47, 53, 61, 71, 73, 79, 83, 89, 97, 107, 109, 113, 127, 137, 139, 151, 163, 167, 173, 179, 181, 191, 193, 197, 199, 211, 223, 227, 229, 239, 241, 251, 269, 277, 281 (OEIS: [A007703](#))

## Repunit primes

Primes containing only the decimal digit 1.

11, 111111111111111111 (19 digits), 111111111111111111111 (23 digits) (OEIS: [A004022](#))

The next have 317, 1031, 49081, 86453, 109297, and 270343 digits, respectively (OEIS: [A004023](#)).

## Residue classes of primes

Of the form  $an + d$  for fixed integers  $a$  and  $d$ . Also called primes congruent to  $d$  modulo  $a$ .

The primes of the form  $2n+1$  are the odd primes, including all primes other than 2. Some sequences have alternate names:  $4n+1$  are Pythagorean primes,  $4n+3$  are the integer Gaussian primes, and  $6n+5$  are the Eisenstein primes (with 2 omitted). The classes  $10n+d$  ( $d = 1, 3, 7, 9$ ) are primes ending in the decimal digit  $d$ .

$2n+1$ : 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43, 47, 53 (OEIS: [A065091](#))  
 $4n+1$ : 5, 13, 17, 29, 37, 41, 53, 61, 73, 89, 97, 101, 109, 113, 137 (OEIS: [A002144](#))  
 $4n+3$ : 3, 7, 11, 19, 23, 31, 43, 47, 59, 67, 71, 79, 83, 103, 107 (OEIS: [A002145](#))  
 $6n+1$ : 7, 13, 19, 31, 37, 43, 61, 67, 73, 79, 97, 103, 109, 127, 139 (OEIS: [A002476](#))  
 $6n+5$ : 5, 11, 17, 23, 29, 41, 47, 53, 59, 71, 83, 89, 101, 107, 113 (OEIS: [A007528](#))  
 $8n+1$ : 17, 41, 73, 89, 97, 113, 137, 193, 233, 241, 257, 281, 313, 337, 353 (OEIS: [A007519](#))  
 $8n+3$ : 3, 11, 19, 43, 59, 67, 83, 107, 131, 139, 163, 179, 211, 227, 251 (OEIS: [A007520](#))  
 $8n+5$ : 5, 13, 29, 37, 53, 61, 101, 109, 149, 157, 173, 181, 197, 229, 269 (OEIS: [A007521](#))  
 $8n+7$ : 7, 23, 31, 47, 71, 79, 103, 127, 151, 167, 191, 199, 223, 239, 263 (OEIS: [A007522](#))  
 $10n+1$ : 11, 31, 41, 61, 71, 101, 131, 151, 181, 191, 211, 241, 251, 271, 281 (OEIS: [A030430](#))  
 $10n+3$ : 3, 13, 23, 43, 53, 73, 83, 103, 113, 163, 173, 193, 223, 233, 263 (OEIS: [A030431](#))  
 $10n+7$ : 7, 17, 37, 47, 67, 97, 107, 127, 137, 157, 167, 197, 227, 257, 277 (OEIS: [A030432](#))  
 $10n+9$ : 19, 29, 59, 79, 89, 109, 139, 149, 179, 199, 229, 239, 269, 349, 359 (OEIS: [A030433](#))  
 $12n+1$ : 13, 37, 61, 73, 97, 109, 157, 181, 193, 229, 241, 277, 313, 337, 349 (OEIS: [A068228](#))  
 $12n+5$ : 5, 17, 29, 41, 53, 89, 101, 113, 137, 149, 173, 197, 233, 257, 269 (OEIS: [A040117](#))  
 $12n+7$ : 7, 19, 31, 43, 67, 79, 103, 127, 139, 151, 163, 199, 211, 223, 271 (OEIS: [A068229](#))  
 $12n+11$ : 11, 23, 47, 59, 71, 83, 107, 131, 167, 179, 191, 227, 239, 251, 263 (OEIS: [A068231](#))

## Safe primes

Where  $p$  and  $(p-1)/2$  are both prime.

5, 7, 11, 23, 47, 59, 83, 107, 167, 179, 227, 263, 347, 359, 383, 467, 479, 503, 563, 587, 719, 839, 863, 887, 983, 1019, 1187, 1283, 1307, 1319, 1367, 1439, 1487, 1523, 1619, 1823, 1907 (OEIS: [A005385](#))

## Self primes in base 10

Primes that cannot be generated by any integer added to the sum of its decimal digits.

3, 5, 7, 31, 53, 97, 211, 233, 277, 367, 389, 457, 479, 547, 569, 613, 659, 727, 839, 883, 929, 1021, 1087, 1109, 1223, 1289, 1447, 1559, 1627, 1693, 1783, 1873 (OEIS: [A006378](#))

## Sexy primes

Where  $(p, p + 6)$  are both prime.

(5, 11), (7, 13), (11, 17), (13, 19), (17, 23), (23, 29), (31, 37), (37, 43), (41, 47), (47, 53), (53, 59), (61, 67), (67, 73), (73, 79), (83, 89), (97, 103), (101, 107), (103, 109), (107, 113), (131, 137), (151, 157), (157, 163), (167, 173), (173, 179), (191, 197), (193, 199) (OEIS: [A023201](#), OEIS: [A046117](#))

## Smarandache–Wellin primes

Primes that are the concatenation of the first  $n$  primes written in decimal.

2, 23, 2357 (OEIS: [A069151](#))

The fourth Smarandache-Wellin prime is the 355-digit concatenation of the first 128 primes that end with 719.

## Solinas primes

Of the form  $2^k - c_1 \cdot 2^{k-1} - c_2 \cdot 2^{k-2} - \dots - c_k$ .

- 3, 5, 7, 11, 13 (OEIS: [A165255](#))

- $2^{32} - 5$ , the largest prime that fits into 32 bits of memory.<sup>[17]</sup>
- $2^{64} - 59$ , the largest prime that fits into 64 bits of memory.

## **Sophie Germain primes**

Where  $p$  and  $2p + 1$  are both prime. A Sophie Germain prime has a corresponding [safe prime](#).

[2](#), [3](#), [5](#), [11](#), [23](#), [29](#), [41](#), [53](#), [83](#), [89](#), [113](#), [131](#), [173](#), [179](#), [191](#), [233](#), [239](#), [251](#), [281](#), [293](#), [359](#), [419](#), [431](#), [443](#), [491](#), [509](#), [593](#), [641](#), [653](#), [659](#), [683](#), [719](#), [743](#), [761](#), [809](#), [911](#), [953](#) (OEIS: [A005384](#))

## **Stern primes**

Primes that are not the sum of a smaller prime and twice the square of a nonzero integer.

[2](#), [3](#), [17](#), [137](#), [227](#), [977](#), [1187](#), [1493](#) (OEIS: [A042978](#))

As of 2011, these are the only known Stern primes, and possibly the only existing.

## **Super-primes**

Primes with prime-numbered indexes in the sequence of prime numbers (the 2nd, 3rd, 5th, ... prime).

[3](#), [5](#), [11](#), [17](#), [31](#), [41](#), [59](#), [67](#), [83](#), [109](#), [127](#), [157](#), [179](#), [191](#), [211](#), [241](#), [277](#), [283](#), [331](#), [353](#), [367](#), [401](#), [431](#), [461](#), [509](#), [547](#), [563](#), [587](#), [599](#), [617](#), [709](#), [739](#), [773](#), [797](#), [859](#), [877](#), [919](#), [967](#), [991](#) (OEIS: [A006450](#))

## **Supersingular primes**

There are exactly fifteen supersingular primes:

[2](#), [3](#), [5](#), [7](#), [11](#), [13](#), [17](#), [19](#), [23](#), [29](#), [31](#), [41](#), [47](#), [59](#), [71](#) (OEIS: [A002267](#))

## **Thabit primes**

Of the form  $3 \times 2^n - 1$ .

[2](#), [5](#), [11](#), [23](#), [47](#), [191](#), [383](#), [6143](#), [786431](#), [51539607551](#), [824633720831](#), [26388279066623](#), [108086391056891903](#), [55340232221128654847](#), [226673591177742970257407](#) (OEIS: [A007505](#))

The primes of the form  $3 \times 2^n + 1$  are related.

[7](#), [13](#), [97](#), [193](#), [769](#), [12289](#), [786433](#), [3221225473](#), [206158430209](#), [6597069766657](#) (OEIS: [A039687](#))

## **Prime triplets**

Where  $(p, p+2, p+6)$  or  $(p, p+4, p+6)$  are all prime.

([5](#), [7](#), [11](#)), ([7](#), [11](#), [13](#)), ([11](#), [13](#), [17](#)), ([13](#), [17](#), [19](#)), ([17](#), [19](#), [23](#)), ([37](#), [41](#), [43](#)), ([41](#), [43](#), [47](#)), ([67](#), [71](#), [73](#)), ([97](#), [101](#), [103](#)), ([101](#), [103](#), [107](#)), ([103](#), [107](#), [109](#)), ([107](#), [109](#), [113](#)), ([191](#), [193](#), [197](#)), ([193](#), [197](#), [199](#)), ([223](#), [227](#), [229](#)), ([227](#), [229](#), [233](#)), ([277](#), [281](#), [283](#)), ([307](#), [311](#), [313](#)), ([311](#), [313](#), [317](#)), ([347](#), [349](#), [353](#)) (OEIS: [A007529](#), OEIS: [A098414](#), OEIS: [A098415](#))

## **Truncatable prime**

### **Left-truncatable**

Primes that remain prime when the leading decimal digit is successively removed.

[2](#), [3](#), [5](#), [7](#), [13](#), [17](#), [23](#), [37](#), [43](#), [47](#), [53](#), [67](#), [73](#), [83](#), [97](#), [113](#), [137](#), [167](#), [173](#), [197](#), [223](#), [283](#), [313](#), [317](#), [337](#), [347](#), [353](#), [367](#), [373](#), [383](#), [397](#), [443](#), [467](#), [523](#), [547](#), [613](#), [617](#), [643](#), [647](#), [653](#), [673](#), [683](#) (OEIS: [A024785](#))

### **Right-truncatable**

Primes that remain prime when the least significant decimal digit is successively removed.

[2](#), [3](#), [5](#), [7](#), [23](#), [29](#), [31](#), [37](#), [53](#), [59](#), [71](#), [73](#), [79](#), [233](#), [239](#), [293](#), [311](#), [313](#), [317](#), [373](#), [379](#), [593](#), [599](#), [719](#), [733](#), [739](#), [797](#), [2333](#), [2339](#), [2393](#), [2399](#), [2939](#), [3119](#), [3137](#), [3733](#), [3739](#), [3793](#), [3797](#) (OEIS: [A024770](#))

### **Two-sided**

Primes that are both left-truncatable and right-truncatable. There are exactly fifteen two-sided primes:

[2](#), [3](#), [5](#), [7](#), [23](#), [37](#), [53](#), [73](#), [313](#), [317](#), [373](#), [797](#), [3137](#), [3797](#), [739397](#) (OEIS: [A020994](#))

## Twin primes

Where  $(p, p+2)$  are both prime.

(3, 5), (5, 7), (11, 13), (17, 19), (29, 31), (41, 43), (59, 61), (71, 73), (101, 103), (107, 109), (137, 139), (149, 151), (179, 181), (191, 193), (197, 199), (227, 229), (239, 241), (269, 271), (281, 283), (311, 313), (347, 349), (419, 421), (431, 433), (461, 463) (OEIS: [A001359](#), OEIS: [A006512](#))

## Unique primes

The list of primes  $p$  for which the period length of the decimal expansion of  $1/p$  is unique (no other prime gives the same period).

3, 11, 37, 101, 9091, 9901, 333667, 909091, 99990001, 999999000001, 9999999900000001, 9090909090909091, 111111111111111111, 1111111111111111111111, 90090090090090909091 (OEIS: [A040017](#))

## Wagstaff primes

Of the form  $(2^n + 1) / 3$ .

3, 11, 43, 683, 2731, 43691, 174763, 2796203, 715827883, 2932031007403, 768614336404564651, 201487636602438195784363, 845100400152152934331135470251, 56713727820156410577229101238628035243 (OEIS: [A000979](#))

Values of  $n$ :

3, 5, 7, 11, 13, 17, 19, 23, 31, 43, 61, 79, 101, 127, 167, 191, 199, 313, 347, 701, 1709, 2617, 3539, 5807, 10501, 10691, 11279, 12391, 14479, 42737, 83339, 95369, 117239, 127031, 138937, 141079, 267017, 269987, 374321 (OEIS: [A000978](#))

## Wall–Sun–Sun primes

A prime  $p > 5$ , if  $p^2$  divides the Fibonacci number  $F_{p-\left(\frac{p}{5}\right)}$ , where the Legendre symbol  $\left(\frac{p}{5}\right)$  is defined as

$$\left(\frac{p}{5}\right) = \begin{cases} 1 & \text{if } p \equiv \pm 1 \pmod{5} \\ -1 & \text{if } p \equiv \pm 2 \pmod{5}. \end{cases}$$

As of 2018, no Wall-Sun-Sun primes are known.

## Wieferich primes

Primes  $p$  such that  $a^{p-1} \equiv 1 \pmod{p^2}$  for fixed integer  $a > 1$ .

$2^{p-1} \equiv 1 \pmod{p^2}$ : 1093, 3511 (OEIS: [A001220](#))  
 $3^{p-1} \equiv 1 \pmod{p^2}$ : 11, 1006003 (OEIS: [A014127](#))<sup>[18][19][20]</sup>  
 $4^{p-1} \equiv 1 \pmod{p^2}$ : 1093, 3511  
 $5^{p-1} \equiv 1 \pmod{p^2}$ : 2, 20771, 40487, 53471161, 1645333507, 6692367337, 188748146801 (OEIS: [A123692](#))  
 $6^{p-1} \equiv 1 \pmod{p^2}$ : 66161, 534851, 3152573 (OEIS: [A212583](#))  
 $7^{p-1} \equiv 1 \pmod{p^2}$ : 5, 491531 (OEIS: [A123693](#))  
 $8^{p-1} \equiv 1 \pmod{p^2}$ : 3, 1093, 3511  
 $9^{p-1} \equiv 1 \pmod{p^2}$ : 2, 11, 1006003  
 $10^{p-1} \equiv 1 \pmod{p^2}$ : 3, 487, 56598313 (OEIS: [A045616](#))  
 $11^{p-1} \equiv 1 \pmod{p^2}$ : 71<sup>[21]</sup>  
 $12^{p-1} \equiv 1 \pmod{p^2}$ : 2693, 123653 (OEIS: [A111027](#))  
 $13^{p-1} \equiv 1 \pmod{p^2}$ : 2, 863, 1747591 (OEIS: [A128667](#))<sup>[21]</sup>  
 $14^{p-1} \equiv 1 \pmod{p^2}$ : 29, 353, 7596952219 (OEIS: [A234810](#))  
 $15^{p-1} \equiv 1 \pmod{p^2}$ : 29131, 119327070011 (OEIS: [A242741](#))  
 $16^{p-1} \equiv 1 \pmod{p^2}$ : 1093, 3511  
 $17^{p-1} \equiv 1 \pmod{p^2}$ : 2, 3, 46021, 48947 (OEIS: [A128668](#))<sup>[21]</sup>  
 $18^{p-1} \equiv 1 \pmod{p^2}$ : 5, 7, 37, 331, 33923, 1284043 (OEIS: [A244260](#))  
 $19^{p-1} \equiv 1 \pmod{p^2}$ : 3, 7, 13, 43, 137, 63061489 (OEIS: [A090968](#))<sup>[21]</sup>  
 $20^{p-1} \equiv 1 \pmod{p^2}$ : 281, 46457, 9377747, 122959073 (OEIS: [A242982](#))  
 $21^{p-1} \equiv 1 \pmod{p^2}$ : 2  
 $22^{p-1} \equiv 1 \pmod{p^2}$ : 13, 673, 1595813, 492366587, 9809862296159 (OEIS: [A298951](#))  
 $23^{p-1} \equiv 1 \pmod{p^2}$ : 13, 2481757, 13703077, 15546404183, 2549536629329 (OEIS: [A128669](#))  
 $24^{p-1} \equiv 1 \pmod{p^2}$ : 5, 25633  
 $25^{p-1} \equiv 1 \pmod{p^2}$ : 2, 20771, 40487, 53471161, 1645333507, 6692367337, 188748146801

As of 2018, these are all known Wieferich primes with  $a \leq 25$ .

## Wilson primes

Primes  $p$  for which  $p^2$  divides  $(p-1)! + 1$ .

5, 13, 563 (OEIS: A007540)

As of 2018, these are the only known Wilson primes.

## Wolstenholme primes

Primes  $p$  for which the binomial coefficient  $\binom{2p-1}{p-1} \equiv 1 \pmod{p^4}$ .

16843, 2124679 (OEIS: A088164)

As of 2018, these are the only known Wolstenholme primes.

## Woodall primes

Of the form  $n \times 2^n - 1$ .

7, 23, 383, 32212254719, 2833419889721787128217599, 195845982777569926302400511, 4776913109852041418248056622882488319 (OEIS: A050918)
